

# If elected to the 48th Parliament, will you or your party commit to?

## Save nature: Stop bulldozing the bush

Deliver strong new nature laws to protect Australia's unique wildlife and the places we love.

Implement a national action plan to end deforestation by 2030.

Require big business to publicly report their impacts on nature and take action to halt and reverse nature damage.

Support farmers to protect and restore nature on their land.

Boost funding for protecting and recovering nature.

## Champion renewables & cut pollution

Build more renewables faster, in the right locations, for the benefit of people and nature.

Well planned, faster closures of all domestic coal-fired power stations and an orderly phasedown of gas power generation by 2030 and 2035 respectively.

Set an ambitious science-aligned 2035 climate pollution target and action plan consistent with Australia's Paris commitments.

Ensure Australia does our part to lift global climate action and ambition.

## Reject nuclear

Reject proposals for dangerous, polluting, illegal and expensive nuclear power stations.

Treaty on the Prohibition of Nuclear Weapons.

Stop approving uranium mines.

Responsibly manage Australia's radioactive waste.

## Stop the climate wreckers

Make Australia a renewable manufacturing and export superpower.

No more taxpayer handouts to coal, oil and gas.

No new coal and gas approvals.

# The 2025 Australian Federal Election comes at a critical time for climate and nature in Australia. Our window to stop the destruction is rapidly closing. The time for leaders to take decisive action is now.

## YES TO PROTECTING NATURE

STOP BULLDOZING THE BUSH

**We're calling on our politicians to save nature and stop bulldozing the bush!**

Australians love nature, and it's disappearing before our very eyes.

Reckless bulldozing of bush and forest is robbing wildlife of their homes, polluting rivers, accelerating climate change and destroying amazing natural wonders like our precious Great Barrier Reef.

Australia is a world leader in nature destruction and species extinction. Our 25-year-old national nature laws are broken and urgently need repair.

**Save nature: Stop bulldozing the bush**

- Deliver strong new nature laws to protect Australia's unique wildlife and the places we love.
- Implement a national action plan to end deforestation by 2030.
- Require big business to publicly report their impacts on nature and take action to halt and reverse nature damage.
- Support farmers to protect and restore nature on their land.
- Boost funding for protecting and recovering nature.

## YES TO RENEWABLES

POWER AUSTRALIA WITH CHEAP, CLEAN ENERGY

**We're calling on candidates to champion renewables. Let's power everything we can with clean, cheap energy from the wind and sun.**

Renewables are a win win win for Australia. They reduce our power bills, reduce pollution and provide clean and reliable energy for all.

The renewables transition is charging ahead. Replacing dirty fossil fuels with clean, affordable sun and wind power is our best option to tackle the climate crisis.

**Champion renewables & cut pollution**

- Build more renewables faster, in the right locations, for the benefit of people and nature.
- Well-planned, faster closures of all domestic coal-fired power stations and an orderly phasedown of gas power generation by 2030 and 2035 respectively.
- Set an ambitious science-aligned 2035 climate pollution target and action plan consistent with Australia's Paris commitments.
- Ensure Australia does our part to lift global climate action and ambition.

## NO NEW COAL & GAS

STOP THE CLIMATE WRECKERS

**We're calling on candidates to stop the climate wreckers: no new coal and gas!**

Polluting gas companies Woodside and Santos are making record profits while everyday Australians grapple with rising living costs and worsening extreme weather events.

Climate change, driven by the burning of polluting coal, oil and gas, is turbo charging extreme weather events including bushfires, heatwaves, droughts, cyclones and floods.

Australia is the world's third-largest fossil fuel exporter after Russia and the United States. Australia exports so much coal and gas that our nation is the second-largest exporter of fossil fuel CO<sub>2</sub> emissions.

Australians need a parliament that protects our way of life and nature, not one that helps gas companies profit from wrecking the climate.

**Stop the climate wreckers**

- Make Australia a renewable manufacturing and export superpower.
- No more taxpayer handouts to coal, oil and gas.
- No new coal and gas approvals.

## NO TO NUCLEAR

AUSTRALIA'S FUTURE IS RENEWABLE, NOT RADIOACTIVE

**We're calling on candidates to reject nuclear: our future is renewable, not radioactive.**

**Nuclear is not right for Australia.** It's expensive, will take decades to set up, and use more water than any other power source. And no one wants a nuclear reactor in their backyard.

The Coalition's nuclear fantasy is a ploy to delay moving away from polluting coal and gas.

**For just one-fifth of the cost of the Coalition's nuclear fantasy, the government could pay for the installation of rooftop solar on every Aussie home** saving families \$1,300 a year - and generating up to 90% of the energy we currently use to power our lives, businesses and industry. This doesn't even factor the use of battery systems, which would further increase savings and energy resources.

**Reject nuclear**

- Reject proposals for dangerous, polluting, illegal and expensive nuclear power stations.
- Sign the Treaty on the Prohibition of Nuclear Weapons.
- Stop approving uranium mines.
- Responsibly manage Australia's radioactive waste.
